Book Condition: New. Publisher/Verlag: Springer, Berlin | A First Course | Introducing finite-dimensional representations of Lie groups and Lie algebras, this example-oriented book works from representation theory of finite groups, through Lie groups and Lie algebras to the finite dimensional representations of the classical groups. | The primary goal of these lectures is to introduce a beginner to the finite dimensional representations of Lie groups and Lie algebras. Since this goal is shared by quite a few other books, we should explain in this Preface how our approach differs, although the potential reader can probably see this better by a quick browse through the book. Representation theory is simple to define: it is the study of the ways in which a given group may act on vector spaces. It is almost certainly unique, however, among such clearly delineated subjects, in the breadth of its interest to mathematicians. This is not surprising: group actions are ubiquitous in 20th century mathematics, and where the object on which a group acts is not a vector space, we have learned to replace it by one that is. As a consequence, many mathematicians other than specialists in the field come in contact with the subject in various ways. It is for such people that this text is designed. To put it another way, we intend this as a book for beginners to learn from and not as a reference. This idea essentially determines the choice of material covered here. As simple as is the definition of representation theory given above, it fragments considerably when we try to get more specific. | I: Finite Groups.- 1. Representations of Finite Groups.-1.1: Definitions.-1.2: Complete Reducibility; Schur's Lemma.-1.3: Examples: Abelian Groups; \mathfrak{S}_3 .- 2. Characters.-2.1: Characters.-2.2: The First Projection Formula and Its Consequences.-2.3: Examples; \mathfrak{S}_4 and \mathfrak{A}_4 .-2.4: More Projection Formulas; More Consequences.- 3....
