This item is printed on demand - Print on Demand Neuware - Redacción Científica del año 2015 en el tema Medicina - Otros, Idioma: Español, Resumen: La incidencia de la leishmaniasis ha ido en aumento desde la década de los 80, habiéndose encontrado alrededor de veinte especies de Leishmania implicadas como agentes causales de esta parasitosis humana en el mundo. Los criterios empleados en la clasificación de dichas especies han evolucionado desde el empleo de datos eco-biológicos hasta complejos análisis bioquímicos y moleculares. Resulta imprescindible la identificación de las especies de Leishmania presentes en las diferentes áreas endémicas para lograr estimar el pronóstico de cada paciente y procurar la elección del tratamiento más adecuado en cada caso, sobre todo en aquellos lugares donde coexiste más de una especie patógena. The incidence of leishmaniasis has been increasing since the 80s, having found about twenty species of Leishmania involved as causative agents of this human parasitosis in the world. The criteria for the classification of these species have evolved from the use of eco-biological data to complex biochemical and molecular analysis. The identification of Leishmania species in different endemic areas is essential to estimate the prognosis of each patient and try to choose the most appropriate treatment in each case, especially in those places where coexists more than one pathogenic specie. 16 pp. Spanisch.
