

## Molecular Beam Epitaxy of Graphene on Gold Foils: Growth and Characterization

Filesize: 4.91 MB

### ***Reviews***

*The book is simple in read safer to comprehend. It is writter in straightforward words and phrases instead of confusing. You wont truly feel monotomy at anytime of your time (that's what catalogues are for concerning in the event you request me).*

GRIN Verlag Feb 2013, 2013. Taschenbuch. Book Condition: Neu. 210x148x4 mm. This item is printed on demand - Print on Demand Neuware - Master's Thesis from the year 2012 in the subject Materials Science, grade: -, University of California, Berkeley , language: English, comment: Research conducted was done at Lawrence Berkeley National Laboratory and UC Berkeley and was completed within one year (5th year MS program). , abstract: The application of graphene for large-area electronics requires controllable growth of single crystalline quasi-freestanding graphene films. Controllable growth of graphene films on gold foils at various temperatures using molecular beam epitaxy is shown. Film quality and electrical characteristics probed using Hall measurement, Raman spectroscopy, and Rutherford backscattering spectrometry are shown to improve at lower temperature possibly peaking at ~825 C. Further experiments are required to assess a stronger correlation between growth parameters and film characteristics. In particular, varying carbon flux and increasing the number of growths are discussed. 52 pp. Englisch.
