

Reconnaissance Gas Measurements on the East Rift Zone of K Lauea Volcano, Hawai i by Fourier Transform Infrared Spectroscopy: Usgs Open-File Report 20

Filesize: 5.52 MB

Reviews

Thorough guide! Its this sort of excellent read. It is really simplified but unexpected situations in the 50 % in the book. You are going to like just how the blogger create this publication.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.We report the results of a set of measurements of volcanic gases on two small ground level plumes in the vicinity of Puu Oo cone on the middle East Rift Zone (ERZ) of Kilauea volcano, Hawaii on 15 June 2001 using open-path Fourier transform infrared (FTIR) spectroscopy. The work was carried out as a reconnaissance survey to assess the monitoring and research value of FTIR measurements at this volcano. Despite representing emissions of residual volatiles from lava that has undergone prior degassing, the plumes contained detectable amounts of CO₂, CO, SO₂, HCl, HF and SiF₄. Various processes, including subsurface cooling, condensation of water in the atmospheric plume, oxidation, dissolution in water, and reactions with wall rocks at plume vents affect the abundance of these gases. Low concentrations of volcanic CO₂ measured against a high ambient background are not well constrained by FTIR spectroscopy. Although there appear to be some differences between these gases and Puu Oo source gases, ratios of HCl/SO₂, HF/SO₂ and CO/SO₂ determined by FTIR measurements of these two small plumes compare reasonably well with earlier published analyses of ERZ vent samples. The measurements yielded emission rate estimates of 4, 11 and 4 t d⁻¹.
