

Control System Tunning with MATLAB (Paperback)

Filesize: 6.11 MB

Reviews

A fresh electronic book with a new viewpoint. I was able to comprehend every thing using this written e pdf. Once you begin to read the book, it is extremely difficult to leave it before concluding.

CONTROL SYSTEM TUNNING WITH MATLAB (PAPERBACK)

[DOWNLOAD](#)

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.

Control System Toolbox provides tools for automatically tuning control systems from high-level design goals that you specify, such as reference tracking, disturbance rejection, and stability margins. The software jointly tunes all the free parameters of your control system regardless of control system architecture, the number of feedback loops it contains, or whether it is modeled in MATLAB or Simulink. You can use the interactive Control System Tuner app, or tune at the command line. The Control System Tuner app tunes control systems modeled in MATLAB or Simulink (requires Simulink Control Design software). This app lets you tune any control system architecture to meet your design goals. You can tune multiple fixed-order, fixed-structure SISO or MIMO control elements distributed over any number of feedback loops. Control System Tuner automatically tunes the controller parameters to satisfy the must-have requirements (design constraints) and to best meet the remaining requirements (objectives). The library of tuning goals lets you capture high-level design requirements in a form suitable for fast automated tuning. Available tuning goals include standard control objectives such as reference tracking, disturbance rejection, loop shapes, closed-loop damping, and stability margins. You can tune control systems at the command line using the systune command. To do so, either: -Model your system in MATLAB using Control Design Blocks for the tunable controller elements. -Model your system in Simulink, and use the slTuner interface to configure your model for tuning (requires Simulink Control Design software). The library of tuning goals lets you capture high-level design requirements in a form suitable for fast automated tuning. This library includes standard control objectives such as reference tracking, disturbance rejection, loop shapes, closed-loop damping, and stability margins. At the command line, use...
