Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1885 Excerpt: .explicit value of f , which mechanics distinguish as Morin's constant, as, $21,010 E^{-1} t^0$ t das $N \log-i (a--n) V$ The perfect agreement of these formulae with the facts of experience has been illustrated so often that it is almost a waste of time to adduce further examples. I will note, for a few vessels, the values of a and b which enter equation (4), which is the approximate true form of the Admiralty equation, the ordinary well known forms being founded on a false law of the resistance, are entirely misleading and erroneous. According to this, the relation between the power and speed, say, for example, in the small vessel Warsaw, is, $E = 2.97 V \log-i 111 V$; hence, for the following speeds, Trial Speeds Product by $111 \log V \log 2-97 \log E$. . E By Trial, = $1-6727 2-1871 2-5097 2-7201 = 47-1 1540 323-4 525 47 153 324 525$ The agreement of these figures is closer than we have any right to expect, considering the many sources of uncertainty which affect the data by which the relation of power and speed is determined in progressive speed trials. I shall now illustrate the calculation of the value of Morin's constant by formula (5), taking, for example, H.M.S. Heroine, which has been referred to by Mr Denny, I presume, as an example of the absurdity of my method of treating the question. The data for this is given in the...
