

## Ensayos en mesa vibratoria de muros de concreto para VIS

By Carrillo, Julián

Condition: New. Publisher/Verlag: Editorial Académica Española | Estudio sobre viviendas de interés social, VIS | En la última década se ha incrementado la construcción de viviendas de interés social, VIS, utilizando muros de concreto. En VIS se utilizan muros con baja resistencia de concreto y espesor reducido. Adicionalmente, en zonas donde las demandas sísmicas son tan bajas que no controlan el diseño, el refuerzo mínimo a cortante que se especifica en el Reglamento ACI-318 parece ser excesivo para controlar el agrietamiento por tensión diagonal. Por consiguiente, en la práctica es común el uso de cuantías menores que las mínimas especificadas en ACI-318 y refuerzo a cortante en el alma formado por mallas de alambre soldado. En este libro se presentan los resultados de ensayos en mesa vibratoria de muros con espesor y cuantías de refuerzo reducidas, utilizando concretos de peso normal y peso ligero, refuerzo a cortante en el alma formado por barras corrugadas y malla de alambre soldado, y muros con aberturas. A partir de los resultados experimentales se proponen recomendaciones para calcular la contribución de la cuantía de acero, así como el efecto del tipo de refuerzo y el tipo de concreto sobre las capacidades de resistencia a...
