

Mobile Agent for Data Gathering in Wireless Sensor Networks

Filesize: 8.69 MB

Reviews

This is the very best publication i have got go through until now. I am quite late in start reading this one, but better then never. I discovered this pdf from my dad and i encouraged this book to understand.

MOBILE AGENT FOR DATA GATHERING IN WIRELESS SENSOR NETWORKS

To get **Mobile Agent for Data Gathering in Wireless Sensor Networks** PDF, make sure you refer to the link below and download the file or gain access to additional information that are have conjunction with MOBILE AGENT FOR DATA GATHERING IN WIRELESS SENSOR NETWORKS book.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Research Perspective | Mobile agent is a vehicle equipped with powerful transceiver and battery which finds the shortest path to gather data from the sensors and finally transports the data to the sink. The problem of minimizing the length of each data-gathering tour is mainly focused here. The mobile agent involves Bee Colony Optimization for travelling salesman problem. The Artificial Bee Colony algorithm (ABC) optimization is a population-based search algorithm which applies the concept of social interaction to problem solving. This algorithm is applied to the process of path planning problems for the mobile agents; it finds the shortest path for the mobile agents to collect the data from sensors as well as best in computation time. The effectiveness of the paths has been evaluated with the parameters such as tour length, agent travel time by Artificial Bee Colony Algorithm. This algorithm also prolong the lifetime of the sensors when compared to other existing approaches. Artificial Bee Colony algorithm has the advantages of strong robustness, fast convergence and high flexibility. This approach gives the best results for finding the shortest path in a shortest time. | Format: Paperback | Language/Sprache: english | 68 pp.
