Reviews

This publication may be worth purchasing. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.

Createspace Independent Publishing Platform, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.In the model of evolution, genes gain along a cellular pathway, but the molecular pathway, results from cellular change. However, from 3.9 to 3.5 billion years, the first change was molecular, but the model of this has been overlooked. At 3.5 billion years, Darwinian selection began, but this must add to earlier, molecular selection. The book provides a physical and mathematical basis of the changes. For many instances of short-scale change within modern species, the cellular model is sufficient. However, for large changes that involved transitions to a newer type, the extra pathways of molecular change must be added. Changes of prelife, the chromosome, higher life, sexual reproduction, or the direction of life, cannot be solved by a standard model. From the new model, the book offers insights into large-scale changes, plus observations on human evolution. A summary outlines the thesis. Sean Gould has a background in information and control systems, but he became interested in evolution over the paradoxes of large-scale change. He has a book on human evolution. Some comments on the earlier book. This volume provides a valuable discursive evolutionary explanation for the emergence of moral and ethical reasoning - a topic little, if ever, offered much space in the modern literature concerned with evolutionary psychology and adaptive intelligent systems. Tony Dickinson (a visiting research fellow to the Snyder Lab for Higher Brain Function at Washington University School of Medicine.).
