Not illustrated. 1902 Excerpt: . function of degree $m-y$, shall have $m-y-8$ linearly independent regular integrals, is that JV shall be a product of the form QMD , where the indicial functions of, i , D are of degrees $5, 0, m-y-b$ respectively, and D is of order $m-y-b$. Is there any limitation upon the order of $M1$ (Cayley.) Ex. 5. Shew that an equation $QD = 0$ has at least as many regular integrals as $Z) = 0$, and not more than $Q = 0$ and $Z) = 0$ together; and that, if all the integrals of $D=0$ are regular, then $QD=0$ has as many regular integrals as $Q = 0$ and $D = 0$ together. Hence (or otherwise) shew that, if an equation $P=0$ has all its integrals regular, then P can be resolved into a product of operators, each of the first order and such that, equated to zero, it has a regular integral. Is this resolution unique (Frobenius.) 78. In the two extreme cases, first, where the degree of the indicial function is equal to the order of the equation, and second, where its degree is zero, the number of regular integrals is equal to that degree. The preceding proposition shews that, in the intermediate cases, the degree merely gives an upper limit for the number of regular integrals. It is natural to enquire whether the number can fall below that upper limit. As a matter of fact, it is possible to construct equations, the number of whose...
