A heavy weight, moving at railway speeds, cannot be brought into contact with the hard earth painlessly. The shock absorbers fitted to the under-carriage cannot absorb unlimited strains. An aeroplane soon becomes loose and soggy in all its joints if its pilot habitually thumps it down on the ground from twelve inches higher up than is necessary. Bad landings will make themselves felt in terms of s. d. upon balance sheets, and the responsible pilots will be black-listed. From the three standpoints of technical efficiency, personal safety, and economy, every pilot must practise landing until he is supremely deft under all ordinary conditions. This chapter deals with landing from all ordinary points of view, commencing with the elementary types and proceeding to more advanced and difficult tactics. It is difficult to fix a point in the air...
