

The Biological bulletin Volume 26-27

By Marine Biological Laboratory

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 226 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 edition. Excerpt: . . . the inhibition point would be automatically prevented. This is the argument applied by Loeb in contraversion of R. S. Lillies idea that CO might be the antagonist, for inasmuch as CO₂ is a good agency for calling forth membrane formation and as only substances capable of diffusing into the egg can have this effect, the egg surface must be permeable to it before impregnation, and consequently there can be no accumulation that could be relieved as the result of the increase in permeability associated with fertilization. However two possibilities remain; either the quantitative difference in the rate of secretion between unfertilized ova and ova undergoing fertilization is significant, or there is a qualitative difference as yet undetected between the secretions from the two kinds of eggs. Since the velocity of segmentation in eggs fertilized by two spermatozoa is identical with that found in eggs fertilized...
