

## STACS &94

By Enjalbert, Patrice / Mayr, Ernst W.

Book Condition: New. Publisher/Verlag: Springer, Berlin | 11th Annual Symposium on Theoretical Aspects of Computer Science, Caen, France, February 24-26, 1994. Proceedings | This volume constitutes the proceedings of the 11th annual Symposium on Theoretical Aspects of Computer Science (STACS &94), held in Caen, France, February 24-26, 1994. Besides three prominent invited papers, the proceedings contains 60 accepted contributions chosen by the international program committee during a highly competitive reviewing process from a total of 234 submissions for 38 countries. The volume competently represents most areas of theoretical computer science with a certain emphasis on (parallel) algorithms and complexity. | The nature and meaning of perturbations in geometric computing.- One binary horn clause is enough.- Transforming constraint logic programs.- A hierarchy of temporal logics with past.- The complexity of resource-bounded first-order classical logic.- Two proof procedures for a cardinality based language in propositional calculus.- The alternation hierarchy for machines with sublogarithmic space is infinite.- Quasilinear time complexity theory.- Space-efficient deterministic simulation of probabilistic automata.- Reachability and the power of local ordering.- Are parallel machines always faster than sequential machines?.- Ground reducibility and automata with disequality constraints.- Perpetuality and strong normalization in orthogonal term rewriting systems.- About changing the ordering during Knuth-Bendix...

### Reviews

*Just no words to explain. Indeed, it is actually play, nevertheless an amazing and interesting literature. Its been written in an exceptionally simple way and is particularly simply following i finished reading through this ebook by which in fact altered me, alter the way in my opinion.*

-- **Leilani Rippin**

*It in just one of my personal favorite publication. It is among the most awesome publication i have read. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- **Delia Rutherford**
