

# A Method for the Validation of Space Debris Models and for the Analysis and Planning of Radar and Optical Surveys

Filesize: 5.46 MB

## Reviews

*This ebook is amazing. I actually have read and i also am certain that i will going to read once more again down the road. I found out this pdf from my dad and i advised this book to discover.*

## A METHOD FOR THE VALIDATION OF SPACE DEBRIS MODELS AND FOR THE ANALYSIS AND PLANNING OF RADAR AND OPTICAL SURVEYS

To read **A Method for the Validation of Space Debris Models and for the Analysis and Planning of Radar and Optical Surveys** eBook, make sure you follow the hyperlink under and save the file or get access to other information which are highly relevant to A METHOD FOR THE VALIDATION OF SPACE DEBRIS MODELS AND FOR THE ANALYSIS AND PLANNING OF RADAR AND OPTICAL SURVEYS book.

Shaker Verlag Nov 2003, 2003. Taschenbuch. Condition: Neu. Neuware - Today, mission planners fully rely on space debris models to assess the mission risk for spacecraft. To increase the reliability of these models they need to be validated by all available measurement data. Currently, ground-based optical and radar sensors provide most of the required data. However, these data are subjected to the geometrie constraints and selection effects as well as to the sensitivity of the instruments. The scope of this work is the definition, development and application of a tool for the validation of debris models using all available measurement data and accounting for all the stated problems. This tool is called PROOF (Program for Radar and Optical Observation Forecasting). PROOF simulates the measurement campaigns, considering all details of the instrument and the campaign using the space debris model as input. By this, PROOF is able to transform and filter the space debris population into simulated measurement results. In a comparison of simulated and real results for each campaign deficiencies in the model can be detected and traced back to their origin. In order to correlate detected objects with the USSPACECOM catalogue a high precision simulation for the prediction of acquisition times and pass characteristics of TLE objects is possible with the tool. The PROOF software itself consists of three major components: A geometry filter to filter the population with respect to objects that cross the sensor's field of view during the campaign, an optical performance model to reflect the sensitivity of telescopes and a radar performance model to reflect the sensitivity of radar sensors. The optical performance model also contains a sophisticated night sky model describing the direction dependent background radiation. The mathematical and technical decomposition of these components is described in detail in this work. The output of...
