Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Heats of Combustion and of Formation of the Normal Paraffin Hydrocarbons in the Gaseous State, and the Energies of Their Atomic Linkages In this paper the writer utilizes the data on the heats of combustion of methane, ethane, propane, normal butane, and normal pentane recently obtained in this laboratory (1, for the following purposes: first to predict accurate values for the heats of combustion of the normal gaseous paraffin hydrocarbons containing more than 5 carbon atoms; second, to compute values for the heats of formation of all the normal paraffin hydrocarbons in the gaseous state; and third, to test the accuracy of the postulate of the constancy of the energies of the atomic linkages in these molecules. Because of the increasing industrial importance of vapor phase reactions involving the paraffin hydrocarbons, there is great need for values of the heats of formation of these substances in the gaseous state, for making calculations of the chemical equilibria involved. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
