## LEAFLETS OF WESTERN BOTANY, VOL. 3 (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, 2015. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Leaflets of Western Botany, Vol. 3 What is written of them is taken from specimens in Herb. Calif. Acad. Sci. made on other expeditions of the Academy. The Guadalupe Island Pine The first collection of pine on Guadalupe Island was made by Edward Palmer in 1875 and was referred to George Engelmann, who named and described it as a new variety of the Monterey Pine, *Pinus insignis* var. *binata* (1880). According to Engelmann, the new variety had cones typical of the species, but had needles in pairs. In 1895 (p. 42), Lemmon transferred the varietal name to *P. radiata* Don, an earlier name of the Monterey Pine; and following Greene (1887, p. 413) and Brandegee (1888, p. 217; 1890, p. 145), he continued that confusion in names between the pines on the Californian and Lower Californian islands that persisted until recently corrected by Abrams (1923, p. 60) and by Mason (1930, p. 8). My opinion is that the only pine on Guadalupe Island is *P. radiata*, but Mason has more recently reported the occurrence there of *P. muricata* Don (1932, p. 51; 1934, p. 147). His decision-is based on material in the Dudley Herbarium, Stanford University, but the specimens I examined there I believe are referable to *P. radiata*. McMinn and Maino (1935, p. 86) report the occurrence of *P. remorata* Mason on Guadalupe Island, but the report is perhaps based on statements that the Guadalupe Island pine approaches *P. remorata* (cf. Mason, 1932, p. 52). When I visited the pine grove on Guadalupe Island, I distinguished trees with three kinds of cones, one type with the cones very asymmetrical with the umbos of the outer scales much thickened, a second type...
