MATHEMATICAL FOUNDATION OF TURBULENT VISCOUS FLOWS

Springer Berlin Heidelberg Jan 2006, 2006. Taschenbuch. Condition: Neu. Neuware - Five leading specialists reflect on different and complementary approaches to fundamental questions in the study of the Fluid Mechanics and Gas Dynamics equations. Constantin presents the Euler equations of ideal incompressible fluids and discusses the blow-up problem for the Navier-Stokes equations of viscous fluids, describing some of the major mathematical questions of turbulence theory. These questions are connected to the Caffarelli-Kohn-Nirenberg theory of singularities for the incompressible Navier-Stokes equations...
