The stones intended sor examination being first reduced to the finest powder, and exactly weighed, were thoroughly mixed with fixed vegetable alkali and powdered charcoal, and then ignited sor two hours in a covered crucible; at which period the cover being removed, they were calcined until the charcoal was completely dephlogisticatcd. The steatites alone was not exposed to this process, as its solubility was sussciently proved by other experiments. The alkali employed was the pure salt of tartar. In all the trials, both the quantity and quality of the charcoal being the same, there was no reason to apprehend the admixture of any soreign substance. A centeiwy of this coal yielded no more than...
