

Advances in Neural Information Processing Systems: v. 8: Proceedings of the 1995 Conference (Hardback)

Filesize: 2.85 MB

Reviews

I actually started out looking at this book. It really is rally interesting throgh studying time period. I am just happy to inform you that here is the greatest ebook i have read through within my personal daily life and could be he best book for possibly.
(Miss Myrtice Heller)

ADVANCES IN NEURAL INFORMATION PROCESSING SYSTEMS: V. 8: PROCEEDINGS OF THE 1995 CONFERENCE (HARDBACK)

To download **Advances in Neural Information Processing Systems: v. 8: Proceedings of the 1995 Conference (Hardback)** eBook, remember to refer to the button below and save the ebook or get access to additional information which might be in conjunction with ADVANCES IN NEURAL INFORMATION PROCESSING SYSTEMS: V. 8: PROCEEDINGS OF THE 1995 CONFERENCE (HARDBACK) book.

MIT Press Ltd, United States, 1996. Hardback. Book Condition: New. 262 x 180 mm. Language: English Brand New Book. The past decade has seen greatly increased interaction between theoretical work in neuroscience, cognitive science and information processing, and experimental work requiring sophisticated computational modeling. The 152 contributions in NIPS 8 focus on a wide variety of algorithms and architectures for both supervised and unsupervised learning. They are divided into nine parts: Cognitive Science, Neuroscience, Theory, Algorithms and Architectures, Implementations, Speech and Signal Processing, Vision, Applications, and Control. Chapters describe how neuroscientists and cognitive scientists use computational models of neural systems to test hypotheses and generate predictions to guide their work. This work includes models of how networks in the owl brainstem could be trained for complex localization function, how cellular activity may underlie rat navigation, how cholinergic modulation may regulate cortical reorganization, and how damage to parietal cortex may result in neglect. Additional work concerns development of theoretical techniques important for understanding the dynamics of neural systems, including formation of cortical maps, analysis of recurrent networks, and analysis of self-supervised learning. Chapters also describe how engineers and computer scientists have approached problems of pattern recognition or speech recognition using computational architectures inspired by the interaction of populations of neurons within the brain. Examples are new neural network models that have been applied to classical problems, including handwritten character recognition and object recognition, and exciting new work that focuses on building electronic hardware modeled after neural systems. A Bradford Book.
