The qualities which become inherent are influenced also more or less proportionately by the amount of carbon contained. In this respect Chrome Vanadium Steel is a special steel in another sense of the word and cannot be judged by the same standards as the old carbon steels. The point of view of the examiner of the old commercial steels is always that of the actual condition in which the metal exists as he sees it before him and governed by the amount of carbon present. But this point of view has altered gradually until with Chrome Vanadium Analysis Steel the carbon range permissible to obtain specific characteristics has become narrowed. The presence of Chrome Vanadium in Steel intensifies the effect of the carbon in all the best qualities it is capable of producing alone. These increases take form not only in physical results, dynamic strength,...
