

DNA Coding, the Core of Life Sciences: Blind Spots and Major Misunderstandings in Biology (English Version) (Paperback)

Filesize: 9.75 MB

Reviews

The publication is simple in read easier to comprehend. It really is rally interesting throgh looking at time period. I found out this book from my i and dad suggested this pdf to discover.

DNA CODING, THE CORE OF LIFE SCIENCES: BLIND SPOTS AND MAJOR MISUNDERSTANDINGS IN BIOLOGY (ENGLISH VERSION) (PAPERBACK)

[DOWNLOAD](#)

Life and DNA Press, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.DNA Coding, the Core of Life Sciences: ? Blind Spots and Major Misunderstandings in Biology For over one hundred years before DNA coding was discovered, the Theory of Evolution dominated biology. We can call the biology of that era as Pre-DNA Biology. During this era, generations of biologists inherited biological theories derived from the Theory of Evolution. Thus, these biologists cannot understand the error of the Theory of Evolution. However, science does not follow human will. The conclusions expressed by DNA coding conflict with the foundations of the Theory of Evolution. The fact that the DNA coding of all humans have consistent sequences shatters the premise of the Theory of Evolution, namely, that evolution is random. The uniqueness in the number and karyotypes of biological chromosomes prevents the production of new species through continuous and slight change. DNA coding gives new life to biology by revealing the inherent secret of living creatures. Thus, Post-DNA Biology must be established. In this new era of biology, the most urgent task is to understand the inherent nature of living creatures through DNA coding, which consists of DNA decoding and mathematic analysis. Prior to the advent of digital technology, computers, cameras, TVs, films and other forms of analog technology produced the approximate data or low-resolution images. With the arrival of digital technology, everything became clear. Computer coding sequences are similar to DNA coding sequences. Computer technology is expressed by two-form code (0,1) but DNA by four-form code (A, T, C, G). As a result, DNA with sequence of the same length contains information far more than that expressed by computer coding. As it were, each chromosome or mitochondria is a super-micro but super-powerful computer with both...
