Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1832 Excerpt: .observable on the northerly aide of the Lummerfeld. Its diameter could have been scarcely less than a mile. Its walls, which, from subsequent convulsions, now appear elevated but a little above the soil, were composed of dark volcanic sand, cinders, and fragments of basalt slag of a reddish black colour, in which crystals of augite are contained.-J Section II.--The Conversion Of The Crater Of The Lum MERFELD INTO A CRATER LAKE. When it is considered that the southerly flank of the Lummerfeld rose abruptly from the very deep waters of the lake of Gleis, and that a large crater occupied the whole of the eminence even to the very brink of the lake, it is to be presumed, that by volcanic convulsions some rents might have occurred, by which lacustrine waters would find admission into the depths of the crater. That such a catastrophe actually took place, we are assured by collateral evidence, which is irresistible. But it is not so easy to determine whether the lake induced was an open one, or whether it did not rather occupy a sort of subterranean cavity roofed over by the demolished or sunken in walls of the crater, such as can be shewn to have subsisted within the crater of Vesuvius, prior to the mud eruption by which the city of Herculaneum was enveloped. But the solution of this question is a subordinate one, as nearly similar effects, whether from an open or subterranean crater lake, would ensue....
