

Design and Control of Structure of Advanced Carbon Materials for Enhanced Performance

Filesize: 6.84 MB

Reviews

This is basically the very best book we have go through until now. I have got read and i also am confident that i am going to gonna study once again again in the future. I am just very happy to inform you that this is basically the very best ebook we have read inside my own life and might be he very best publication for at any time.

(Angus Hickle)

DESIGN AND CONTROL OF STRUCTURE OF ADVANCED CARBON MATERIALS FOR ENHANCED PERFORMANCE

Book Condition: New. Publisher/Verlag: Springer Netherlands | Proceedings of the NATO Advanced Study Institute, held in Antalya, Turkey, May 10-21, 1998 | Carbon is unique in the range of structures and properties that are displayed by its material forms. The bonds in diamond, within the plane of graphite and in the fullerene molecules, C₆₀, are the strongest covalent bonds possible. This strong covalent bonding leads to some exceptional intrinsic properties, examples of which are: the greatest Young's modulus (in diamond, within the graphite plane and in single walled nanotubes) the highest room temperature thermal conductivity (in diamond and within the graphite plane) high hole mobility in doped diamond exceptional thermal stability of the structure in graphite It is because of the extreme thermal stability that such a wide range of materials is available. Atomic mobilities are low at all but the highest temperatures. Sintering, melting and casting of carbon are not feasible processing operations and carbon/graphite components are exclusively produced from the pyrolytic decomposition of organic precursors. The vast majority of engineering carbons have Sp² type bonding and are related in some way to the structure of graphite. In the c-direction the bonding in graphite is of van der Waals character with the result that graphite is highly anisotropic in its properties and is probably unique in showing both the highest and lowest bond strengths in different directions in the same crystal. | Dedication. List of Participants. Preface. Part One: Structure and Properties. Polymorphism in Carbons and Parent Material; P. Delhaes. Theory and Modelling of Carbon; M.I. Heggie. Characterisation of Carbon Structure; X. Bourrat. Thermal and Electrical Properties of Carbons Relationship to Structure; J.-P. Issi. Surface Properties of Carbons for Advanced Carbon-Based Composites; P. Ehrburger, C. Vix-Guterl. Part Two - Processing. Pitch Precursor-Origin and Chemical Constitution; M.F. Yardim, et al. The Thermal...
