Mathematical and Statistical Methods in Food Science and Technology

By Daniel Granato and Gastón Areas

Bio-Green Wiley, 2017. Hardcover. Condition: New. 1st Edition. Contents: Section I: 1. The use and importance of design of experiments (DOE) in process modelling in food science and technology. 2. The use of correlation, association and regression to analyze processes and products. 3. Case study: Optimization of enzyme-aided extraction of polyphenols from unripe apples by response surface methodology. 4. Case study: Statistical analysis of eurycomanone yield using a full factorial design. Section II: 5. Applications of principal component analysis (PCA) in food science and technology. 6. Multiple factor analysis: Presentation of the method using sensory data. 7. Cluster analysis: Application in food science and technology. 8. Principal component regression (PCR) and partial least squares regression (PLSR). 9. Multiway methods in food science. 10. Multidimensional scaling (MDS). 11. Application of multivariate statistical methods during new product development -- Case study: Application of principal component analysis and hierarchical cluster analysis on consumer liking data of orange juices. 12. Multivariate image analysis. 13. Case Study: Quality control of *Camellia sinensis* and *Ilex paraguariensis* teas marketed in Brazil based on total phenolics, flavonoids and free-radical scavenging activity using chemometrics. Section III: 14. Statistical approaches to develop and validate microbiological analytical methods. 15. Statistical approaches...

Reviews

I actually started looking over this ebook. It is definitely simplified but excitement inside the 50 percent of your ebook. You are going to like just how the blogger create this ebook.

-- **Efren Swift**

Just no phrases to describe. It typically does not price an excessive amount of. It is extremely difficult to leave it before concluding, once you begin to read the book.

-- **Felton Hessel**
