Surveyors take advantage of this principle to check the transit work, considering a close in arc, as it is termed, to be within one minute for good work. The course A B, with respect to which the azimuths are taken, is called the meridian of the survey. 1182. In finding the area of a piece of ground, it is not necessary to know the magnetic bearings of the courses. It is sufficient to have the bearings of the several successive courses with respect to one of the courses taken as a meridian. These may be found from the azimuths, determined as above, in the following manner: Let us suppose that the course taken to start with is a north and south line. We will consider this course as the meridian to which the azimuths of all succeeding courses will be referred. Let the course A B, Fig. 218. be taken as this meridian. The azimuths of the succeeding courses are found by the transit, by the method already described, to be as follows: The azimuth of A B referred to A B = 0. The azimuth of B C referred to A B = 70, angle turned to the right. 11 The azimuth of C D re ferred to A B = 150, angle turned to the right. The azimuth of D E re ferred to A B = 265, angle-turned to the right. The azimuth of E A referred to A B =...
